

## Module 6-Capstone Project Assignment

helle

## User Stories Document – JustEat Food Ordering Application

### Epic 1: Authentication & Authorization

#### User Story 1.1

- *As a User (Customer or Restaurant Owner), I want to log in with valid credentials so that I can access my account securely.*

##### Acceptance Criteria:

1. Login page accepts username/password. o Role-based redirection after login.
2. Invalid credentials show error message.

#### User Story 1.2

- *As a User, I want to reset my password so that I can regain access if I forget it.*

##### Acceptance Criteria:

1. Password reset via secure token/email.
2. New passwords must meet complexity rules.

#### User Story 1.3

- *As a System, I must enforce role-based access so that Customers and Restaurant Owners only see features relevant to them.*

##### Acceptance Criteria:

1. Customers cannot access restaurant management APIs.
2. Restaurant Owner cannot place orders as a customer.

### Epic 2: Customer Features

#### User Story 2.1

- *As a Customer, I want to browse restaurants by location, cuisine, or name so that I can discover food options.*

##### Acceptance Criteria:

1. Search bar with filters.
2. Results show restaurant name, cuisine, rating.

#### User Story 2.2

- *As a Customer, I want to view menus, prices, and cuisine details so that I can make informed choices.*

**Acceptance Criteria:**

Menu items displayed with name, price, description.

#### User Story 2.3

- *As a Customer, I want to add items to my cart and place orders so that I can buy food conveniently.*

**Acceptance Criteria:**

1. Cart supports multiple items with quantity.
2. Order confirmation page with summary.

#### User Story 2.4

- *As a Customer, I want to track my order status so that I know when my food will arrive.*

**Acceptance Criteria:**

Order status updates: Pending, Preparing, Ready, Completed.

#### User Story 2.5

- *Customer, I want to view and search my order history so that I can reorder easily.*

**Acceptance Criteria:**

History shows past orders with date, items, price.

#### User Story 2.6

1. *As a Customer, I want to save preferences (favorite restaurants, cuisines, dietary restrictions) so that my experience is personalized.*
2. **Acceptance Criteria:**
3. Preferences stored in profile.
4. Recommendations reflect saved preferences

### **Epic 3: Restaurant Owner Features**

#### **User Story 3.1**

- *As a Restaurant Owner, I want to register and manage my restaurant so that customers can find it.*

**Acceptance Criteria:**

Owner can add/edit restaurant details.

#### **User Story 3.2**

- *As a Restaurant Owner, I want to add, edit, and delete menu items so that my offerings are up to date.*

**Acceptance Criteria:**

CRUD operations on menu items via secure API.

#### **User Story 3.3**

- *As a Restaurant Owner, I want to mark items as "Today's Special" or "Deal of the Day" so that I can promote them.*

**Acceptance Criteria:**

Specials highlighted in customer view.

#### **User Story 3.4**

- *As a Restaurant Owner, I want the system to automatically identify "Mostly Ordered" items so that I can highlight popular dishes.*

**Acceptance Criteria:**

- a. Backend calculates frequency of orders.
- b. Popular items flagged automatically.

#### **User Story 3.5**

*Restaurant Owner, I want to view order details and update order status so that I can manage customer expectations.*

**Acceptance Criteria:**

- Orders listed with customer details.
- Owner can change status (Pending → Preparing → Ready).

## **Epic 4: System & Infrastructure**

### **User Story 4.1**

- *As a System, I must provide secure API endpoints so that data is protected.*

#### **Acceptance Criteria:**

- All endpoints require JWT authentication.
- Role-based authorization enforced.

### **User Story 4.2**

- *As a Developer, I want API documentation via Swagger so that integration and testing are easier.*

#### **Acceptance Criteria:**

Swagger UI is available at /api-docs.

### **User Story 4.3**

- *As a Developer, I want toast notifications on actions so that users receive feedback.*

#### **Acceptance Criteria:**

Success/failure notifications appear after actions.

### **User Story 4.4 (NFRs)**

- *As a System, I must respond to API requests within 200ms under normal load.*
- *As a System, I must scale automatically on cloud infrastructure.*
- *As a System, I must provide monitoring and logging.*

#### **Acceptance Criteria:**

- a. Performance tests show <200ms response.
- b. Cloud deployment supports auto-scaling.
- c. Logs are accessible via cloud-native tools.

### **4.5 (Ethical AI Usage)**

*Team, we must document ethical AI usage in SDLC so that transparency is maintained.*

#### **Acceptance Criteria:**

- a. AI\_USAGE.md file included.
- b. Clear mention of where AI was used (e.g., code review, test generation).

**Deliverables:**

- Working web portal (React + Spring Boot).
- Database schema with ORM integration.
- Minimum 10-unit tests.
- Docker file for backend.
- Documentation: Readme, AI\_USAGE.md, Swagger API Docs.
- Deploy the application on the Azure cloud platform, capture screenshots of the successful deployment/submission, and ensure all deployed resources are stopped or deleted after completion.
